

A scatter plot showing the relationship between 'Data' (grey dots) and 'Proxy Points' (red dots). The x-axis is labeled 'Proxy Points' and the y-axis is labeled 'Data'. The plot shows a dense, elongated cloud of grey dots representing the 'Data' points, which generally follow a positive linear trend. A few red dots, representing 'Proxy Points', are scattered among the grey dots, mostly in the upper right quadrant of the plot. A legend in the top right corner identifies the grey dots as 'Data' and the red dots as 'Proxy Points'.
